

PropEase - Real Estate Management System

Requirements Specification Document

Functional Requirements (FRs)

User Management & Authentication

- User Registration: Users must be able to sign up for an account using their name, email, and password.
- User Login: Registered users must be able to log in securely.
- Role-Based Access Control (RBAC): The system must support different user roles (e.g., Admin, Owner/Agent, Buyer/Renter) with distinct permissions.
- Profile Management: Users must be able to view and edit their own profile information.

Property Listing & Management

- Create Listings: Authenticated Owners and Agents must be able to create new property listings with details like location, price, type, amenities, etc.
- Upload Media: Users must be able to upload property photos, legal documents, and link 360° virtual tours.
- Manage Listings: Owners and Agents must be able to update, edit, or delete their own property listings from their dashboard.
- Admin Approval: An administrator must approve all new property listings before they become visible to the public.

Search & Discovery

- Smart Search: Users must be able to search for properties using advanced filters (location, budget, property type, amenities, furnishing).
- Map-Based Browsing: Search results must be displayed on an interactive map with clickable property markers.
- Detailed View: Users must be able to click on a property to see a detailed page with all its information, images, and virtual tour.

Communication & Interaction

- Real-Time Chat: The system must include a WebSocket-based chat feature for instant messaging between buyers, sellers, and agents.
- Appointment Scheduling: Users must be able to book property visits through an integrated calendar system.
- Notifications: The system must send automated email and push notifications for important events like new messages, appointment confirmations, and listing approvals.

Tools & Financials

- EMI Calculator: A built-in calculator must be available for users to estimate their home loan installments.
- Secure Payments: The platform must integrate a payment gateway (like Stripe/Razorpay) to process booking fees or charges for premium listings.

Admin Panel

- User Management: Admins must be able to view, verify, and manage all user accounts on the platform.

- Platform Monitoring: The admin dashboard should provide an overview of platform activity, including new listings and user registrations.
-

Non-Functional Requirements (NFRs)

Performance

- Fast Load Times: Property search results and listing pages should load in under 3 seconds.
- High Concurrency: The system must support a minimum of 1,000 users at the same time without performance issues.
- Low Latency: Real-time chat messages should be delivered instantly (e.g., under 500ms).

Security

- Secure Authentication: User sessions must be managed using secure methods like JWT (JSON Web Tokens).
- Data Encryption: All sensitive user data (like passwords) must be encrypted both at rest (in the database) and in transit (using HTTPS).
- Vulnerability Protection: The application must be protected against common web attacks like SQL Injection and Cross-Site Scripting (XSS).

Usability & Accessibility

- Responsive Design: The website must provide an excellent user experience on all devices, including desktops, tablets, and smartphones.

- **Intuitive Interface:** The platform's navigation and layout should be simple and easy for non-technical users to understand.
- **Accessibility:** The site should be developed to meet basic accessibility standards (WCAG).

Reliability & Availability

- **High Uptime:** The system should be available to users 99.9% of the time.
- **Data Integrity:** Automated database backups must be in place to prevent data loss in case of a failure.

Scalability

- **Growth Ready:** The MERN stack architecture must be designed to handle future growth in the number of users and property listings.

Maintainability

- **Clean Code:** The source code should be well-organized, documented, and modular to make future updates and bug fixes easier.

User Stories

1. User (Buyer/Renter)

Registration & Account Management

- **As a new user,** I want to create an account using my email and password, so I can access all the features of the platform.

- **As a user**, I want to log in to my account securely, so I can access my saved preferences and information.
- **As a user**, I want to be able to reset my password if I forget it, so I can regain access to my account.
- **As a registered user**, I want to manage my profile information, like my name and contact details, so I can keep my information up to date.

Property Search & Viewing

- **As a user**, I want to search for properties by specific criteria, such as location, price, or type, so I can quickly find what I need.
- **As a user**, I want to filter and sort a list of properties by parameters like relevance or date listed, to narrow down my search results.
- **As a user**, I want to view a list of properties in a gallery format, so I can easily browse available listings.
- **As a user**, I want to see properties displayed on an interactive map, so I can understand their exact location and proximity to landmarks.
- **As a user**, I want to view detailed information about a specific property, including photos, amenities, and a 360° virtual tour, so I can decide if I'm interested.

Interaction & Personalization

- **As a user**, I want to schedule a property visit through a calendar system, so I can arrange a viewing without back-and-forth emails.
- **As a user**, I want to communicate with the property owner or agent through a real-time chat, so I can ask questions directly.
- **As a user**, I want to receive notifications for appointment confirmations and new chat messages, so I stay informed about my activities.

Financial & Planning Tools

- **As a user**, I want to use a mortgage calculator to estimate my monthly payments based on property price, down payment, and loan terms.
- **As a user**, I want to see a detailed breakdown of monthly payments, including principal, interest, property tax, and insurance, so I can understand the full cost of ownership.

2. Property Owner

Dashboard & Property Management

- **As an owner**, I want to see a dashboard with a quick overview of my properties, including total listings, active listings, and pending approvals.
- **As an owner**, I want to view a list of all my properties with their current status, so I can manage them easily.
- **As an owner**, I want to add a new property listing by providing detailed information, photos, documents, and virtual tour links.
- **As an owner**, I want to edit or delete my existing property listings, so I can keep my information accurate.
- **As an owner**, I want to mark a property as "Sold" or "Rented," so it is removed from active search and I no longer receive inquiries for it.

Analytics & Performance

- **As an owner**, I want to see performance analytics for each property, including how many views and inquiries it is getting, so I can gauge interest.

- **As an owner**, I want to view a summary of my earnings over time, so I can track my revenue from sold or rented properties.
- **As an owner**, I want to have the option to pay to "boost" my listing, so it appears higher in search results for a period of time.

Communications & Scheduling

- **As an owner**, I want to see recent messages from potential buyers or agents in an inbox, so I can respond to inquiries promptly.
- **As an owner**, I want to receive and manage visit requests from my dashboard, so I can approve, reject, or propose new times.
- **As an owner**, I want to see upcoming appointments related to my properties in a calendar view, such as viewings or appraisals.

3. Administrator

Dashboard & Analytics

- **As an admin**, I want to see a dashboard that provides an overview of the platform's key metrics, such as total users, active listings, and revenue.
- **As an admin**, I want to view a graph of weekly performance, including new users and new listings, to track platform growth.
- **As an admin**, I want to see a list of recent activities, such as new registrations or listing submissions, to stay informed about platform events.
- **As an admin**, I want to generate detailed reports on user growth, property performance, and financial transactions.

User & Listing Management

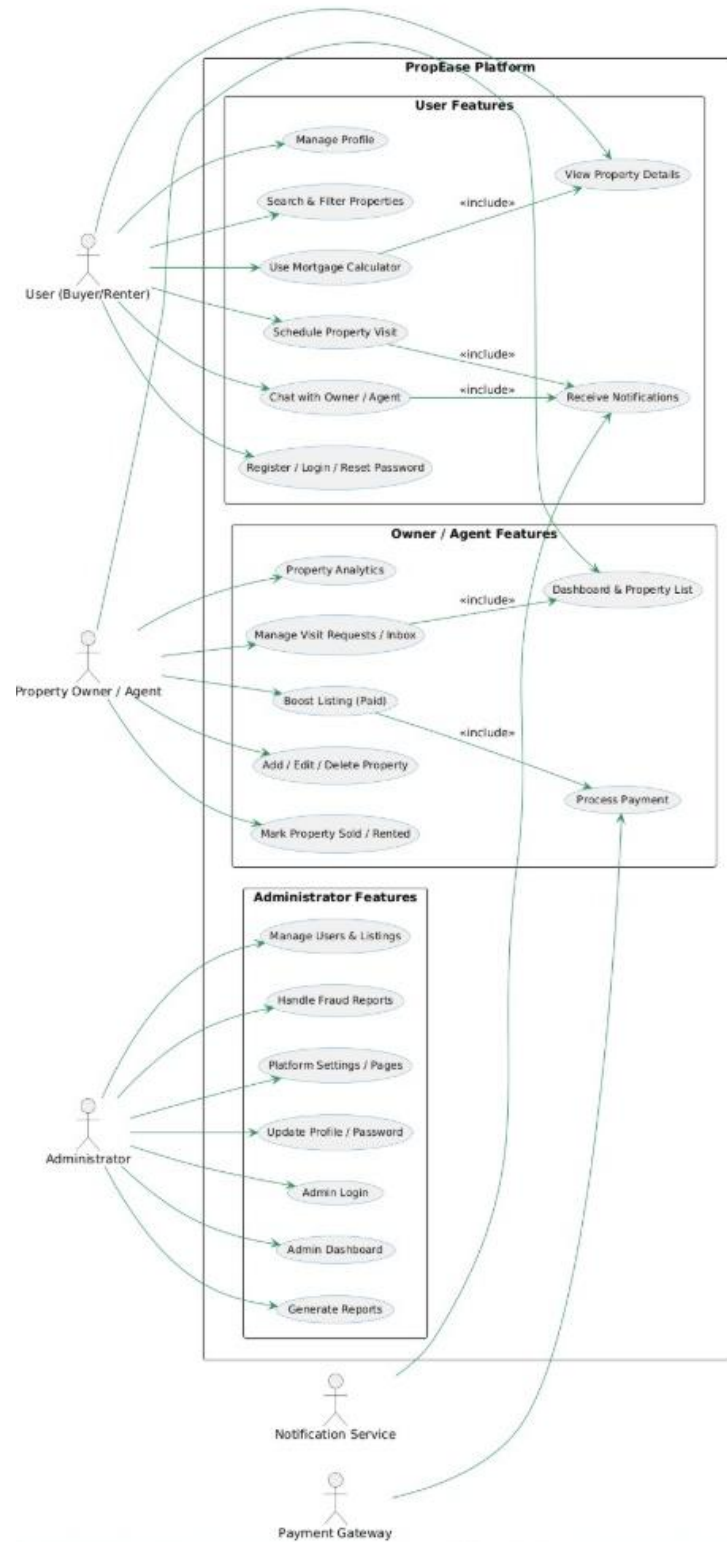

- **As an admin**, I want to view, edit, and manage all user accounts on the platform.

- **As an admin**, I want to filter users by role (e.g., buyer, owner) or status (e.g., active, suspended) to manage them more efficiently.
- **As an admin**, I want to see a list of listings and owner verifications that are pending approval in a dedicated queue.
- **As an admin**, I want to approve or reject new property listings and owner verifications to maintain platform quality.
- **As an admin**, I want to investigate and act on user-submitted reports about fraudulent listings or inappropriate behavior.

Platform Settings & Security

- **As an admin**, I want to manage platform-wide settings, such as the available property types or amenity options in the filters.
- **As an admin**, I want to manage content on static pages like the FAQ and "About Us."
- **As an admin**, I want to update my personal information and change my password.

Use-Case Diagram

Interface requirements

1. User Interface (UI) Requirements

This section defines the visual design, user experience, and on-screen elements of the platform.

- **General Design Principles**

- The UI must be modern, clean, and intuitive, ensuring users can navigate and perform key actions with minimal effort.
- Design consistency must be maintained across all pages and user dashboards, including consistent use of colors, fonts, and component styles.
- The system must provide immediate visual feedback for user actions, such as loading spinners during data fetching, success toasts/snackbars on form submission, and clear error messages.

- **Layout and Responsiveness**

- The interface must be fully responsive, adapting seamlessly to provide an optimal experience on desktops, tablets, and mobile devices.
- Navigation menus, property grids, and forms must reflow and resize intelligently based on screen size.

- **Key Screens and Components**

- **Homepage:** Must feature a prominent property search bar that handles location inputs like "Sargasan, Gandhinagar."
- **Search Results Page:** Must include a toggleable list view and an interactive map view. It needs to display property cards, active filters, and sorting options.
- **Property Details Page:** A well-organized layout to display the image gallery, virtual tour, property description, amenities, owner/agent details, and action buttons ("Schedule Visit", "Chat").
- **User Dashboard (Buyer/Renter):** A personalized space with sections for managing profile settings, viewing "My Favorites," and tracking "My Appointments" (pending and confirmed).
- **Owner Dashboard:** Must feature the specific widgets defined in the user stories: quick overview stats (total listings, active listings), a list of properties with their status, a calendar for appointments, and a message inbox.

- **Admin Dashboard:** A comprehensive interface displaying platform analytics (user growth graphs), moderation queues (pending listings, user reports), and user management tables.
- **Forms:** All forms (Registration, Login, Add Property) must have clear labels, placeholder text, and real-time validation feedback for required or incorrectly formatted fields.

2. System Interface Requirements (External APIs)

This section defines the interfaces between PropEase and external third-party services.

- **Google Maps API**
 - The system will interface with the Google Maps Platform for displaying property locations, converting addresses to coordinates (geocoding), and providing location-based search suggestions.
- **Payment Gateway API (e.g., Stripe, Razorpay)**
 - An interface is required to a secure payment gateway to handle financial transactions for features like "boosting" a property listing. This interface must manage payment processing, success/failure callbacks, and transaction security.
- **Cloud Storage API (e.g., Cloudinary, AWS S3)**
 - The system must interface with a cloud storage provider for all user-generated media. This API will handle the secure upload, storage, and delivery of property photos and legal documents.
- **Transactional Email API**
 - An interface to a dedicated email service is required to send all automated, non-marketing emails, including:
 - Welcome email upon registration.
 - Password reset links.
 - Appointment request and confirmation notifications.
 - New chat message alerts.
 - Saved search alerts.
- **Real-time Communication Interface (WebSockets)**

- The client and server will interface via WebSockets (e.g., using Socket.IO) to enable the real-time, bi-directional communication required for the instant messaging feature.

3. Hardware Interface Requirements

This section describes the hardware on which the software will operate.

- **Client-Side:** The application must run on standard consumer hardware (desktops, laptops, tablets, smartphones) and support standard input devices (keyboard, mouse, touchscreen). No specialized hardware is required.
- **Server-Side:** The application will be deployed on a cloud platform (e.g., AWS, Google Cloud). The server hardware interface will be managed by the cloud provider's infrastructure.

4. Software Interface Requirements

This section defines the software environment and dependencies.

- **Client-Side (User's Device)**
 - **Operating System:** The application must be OS-independent (runs on Windows, macOS, Linux, iOS, Android).
 - **Web Browser:** Full compatibility is required with the latest stable versions of major browsers: Google Chrome, Mozilla Firefox, Apple Safari, and Microsoft Edge. JavaScript must be enabled.
- **Server-Side**
 - **Technology Stack:** The backend will be built on the defined MERN stack (MongoDB, Express.js, React.js, Node.js), and all internal components will interface accordingly.
 - **Database:** The application will interface with a MongoDB database for all data storage and retrieval operations.

- Acceptance criteria

1. User (Buyer/Renter)

Registration & Account Management

- **As a new user, I want to create an account using my email and password, so I can access all the features of the platform.**
 - The registration form must contain fields for Name, Email, and Password.
 - The email field must validate for a correct email format (e.g., harsh12@gmail.com).
 - The system must check if the email is already registered and display an error message if it is.
 - The password field must have a minimum length requirement (e.g., 8 characters) and be masked.
 - Upon successful registration, the user is automatically logged in and redirected to their dashboard.
- **As a user, I want to log in to my account securely, so I can access my saved preferences and information.**
 - The login form must have fields for Email and Password.
 - A successful login with correct credentials redirects the user to their dashboard.
 - An unsuccessful login attempt with incorrect credentials displays a clear error message (e.g., "Invalid email or password").
 - A "Forgot Password?" link must be present on the login page.
- **As a user, I want to be able to reset my password if I forget it, so I can regain access to my account.**
 - The "Forgot Password" page must have a field to enter a registered email address.
 - Upon submitting a valid email, the system sends a password reset link to that email.
 - The reset link must be unique, secure, and have a limited time validity (e.g., 1 hour).
 - The link directs the user to a page where they can enter and confirm their new password.

- **As a registered user, I want to manage my profile information, like my name and contact details, so I can keep my information up to date.**
 - The user dashboard must have a "Profile" or "Settings" section.
 - The profile page must display the user's current information (Name, Email, Contact Number).
 - The user can edit their name and contact number in an editable form.
 - Upon saving, a success message is displayed, and the information is updated across the platform.

Property Search & Viewing

- **As a user, I want to search for properties by specific criteria, such as location, price, or type, so I can quickly find what I need.**
 - The search bar must accept location inputs (e.g., "Sargasan, Gandhinagar").
 - Advanced search options allow filtering by price range, property type, number of bedrooms, etc.
 - Executing a search displays a results page with properties matching the selected criteria.
- **As a user, I want to filter and sort a list of properties by parameters like relevance or date listed, to narrow down my search results.**
 - The search results page must have filter controls that update the results in real-time.
 - Sorting options must be available (e.g., "Price: Low to High," "Newest First").
 - Applying a sort order correctly reorganizes the list of displayed properties.
- **As a user, I want to view a list of properties in a gallery format, so I can easily browse available listings.**
 - Search results are displayed as individual "property cards".
 - Each card must show essential information: a primary image, property title, price, location, and key specs (e.g., beds, baths).
 - Clicking on a card navigates to the detailed property page.

- **As a user, I want to see properties displayed on an interactive map, so I can understand their exact location and proximity to landmarks.**
 - The search results page includes a map view.
 - A pin is displayed on the map for each property in the current search results.
 - Clicking a map pin opens a small info window with basic property details and a link to the full listing.
- **As a user, I want to view detailed information about a specific property, including photos, amenities, and a 360° virtual tour, so I can decide if I'm interested.**
 - The property detail page must display a photo gallery or carousel.
 - It must list all property details: description, price, address, features, and a list of amenities.
 - If a virtual tour link is provided, it must be embedded and playable on the page.

Interaction & Personalization

- **As a user, I want to communicate with the property owner or agent through a real-time chat, so I can ask questions directly.**
 - A "Chat" button is available on the property detail page for logged-in users.
 - The chat interface allows sending and receiving messages in real-time.
 - Chat history is saved and accessible from the user's dashboard.
 - Unread message indicators are shown to the user.
- **As a user, I want to receive notifications for appointment confirmations and new chat messages, so I stay informed about my activities.**
 - The system generates an in-app and/or email notification when a visit is confirmed or rescheduled by the owner.
 - The system generates a notification when a new chat message is received.

Financial & Planning Tools

- **As a user, I want to use a mortgage calculator to estimate my monthly payments based on property price, down payment, and loan terms.**
 - The calculator must have input fields for Property Price, Down Payment, Interest Rate, and Loan Tenure.
 - The estimated monthly payment (EMI) is calculated and displayed automatically as values are changed.
 - The calculation must be accurate based on standard EMI formulas.
 - **As a user, I want to see a detailed breakdown of monthly payments, including principal, interest, property tax, and insurance, so I can understand the full cost.**
 - The calculator results must show a clear breakdown of the EMI components.
 - A pie chart or graph visualizing the principal vs. total interest paid over the loan tenure is displayed.
-

2. Property Owner

Dashboard & Property Management

- **As an owner, I want to see a dashboard with a quick overview of my properties, including total listings, active listings, and pending approvals.**
 - The dashboard must display clear "stat cards" or widgets for each key metric.
 - The numbers displayed must be accurate and reflect the current state of the owner's properties in the database.
- **As an owner, I want to view a list of all my properties with their current status, so I can manage them easily.**
 - The "My Properties" section lists all properties created by the owner.
 - Each listing in the list displays its title, primary image, and current status (e.g., Active, Pending Approval, Rented/Sold).

- **As an owner, I want to add a new property listing by providing detailed information, photos, documents, and virtual tour links.**
 - The "Add Property" form must be a guided, multi-step process.
 - It must include fields for all necessary property details and support uploading multiple images and documents.
 - Upon successful submission, the property is saved with a "Pending Approval" status.
- **As an owner, I want to edit or delete my existing property listings, so I can keep my information accurate.**
 - Each property in the owner's list has an "Edit" and a "Delete" option.
 - The "Edit" button opens the property form pre-filled with existing data.
 - The "Delete" button shows a confirmation modal to prevent accidental deletion.
- **As an owner, I want to mark a property as "Sold" or "Rented," so it is removed from active search and I no longer receive inquiries for it.**
 - The owner can change the status of an "Active" listing.
 - Changing the status to "Sold" or "Rented" removes it from all public search results.
 - The property remains in the owner's dashboard under an "Archived" or "Inactive" tab.

Analytics & Performance

- **As an owner, I want to see performance analytics for each property, including how many views and inquiries it is getting, so I can gauge interest.**
 - The property dashboard shows the total number of page views for each listing.
 - It displays the number of chat inquiries initiated and visit requests received.
 - The owner can filter these analytics by a date range (e.g., last 30 days).
- **As an owner, I want to view a summary of my earnings over time, so I can track my revenue from sold or rented properties.**
 - An "Earnings" tab or widget is available on the dashboard.

- The owner can manually input sale/rent prices for their "Sold/Rented" properties to track revenue.
- The data is displayed in a graph or table, filterable by month or year.
- **As an owner, I want to have the option to pay to "boost" my listing, so it appears higher in search results for a period of time.**
 - A "Boost Listing" button is available on each active property.
 - Clicking it initiates a payment flow via the integrated payment gateway.
 - A successfully boosted listing is given priority in search results and visually marked as "Featured" or "Premium".

Communications & Scheduling

- **As an owner, I want to see recent messages from potential buyers or agents in an inbox, so I can respond to inquiries promptly.**
 - A dedicated "Inbox" or "Messages" section is available in the dashboard.
 - It lists all conversations, with unread messages clearly highlighted.
 - The owner can click on a conversation to view the chat history and send a reply.
- **As an owner, I want to receive and manage visit requests from my dashboard, so I can approve, reject, or propose new times.**
 - New visit requests trigger a notification and appear in an "Appointment Requests" queue.
 - Each request shows the user's name, requested date/time, and has "Approve" and "Reject" buttons.
 - Approving or rejecting a request sends an automated notification back to the user.
- **As an owner, I want to see upcoming appointments related to my properties in a calendar view, such as viewings or appraisals.**
 - An "Appointments" calendar in the dashboard displays all confirmed visits.
 - Each calendar event shows the property name, user name, and time of the visit.

3. Administrator

Dashboard & Analytics

- **As an admin, I want to see a dashboard that provides an overview of the platform's key metrics, such as total users, active listings, and revenue.**
 - The admin dashboard displays high-level KPIs in a clear, easy-to-read format.
 - The data is accurate and reflects real-time platform statistics.
- **As an admin, I want to view a graph of weekly performance, including new users and new listings, to track platform growth.**
 - The dashboard includes line or bar charts visualizing key growth trends over time.
 - The admin can adjust the time frame of the graphs (e.g., weekly, monthly).
- **As an admin, I want to see a list of recent activities, such as new user registrations or listing submissions, to stay informed about platform events.**
 - An "Activity Log" or "Recent Events" feed is present on the dashboard.
 - The log is updated in real-time.
- **As an admin, I want to generate detailed reports on user growth, property performance, and financial transactions.**
 - A "Reports" section allows the admin to generate custom reports.
 - The admin can filter report data by date ranges and other parameters.
 - Reports can be exported in standard formats like CSV or PDF.

User & Listing Management

- **As an admin, I want to view, edit, and manage all user accounts on the platform.**
 - A "Users" tab lists all registered users with key details.
 - The admin can search for specific users by name or email.

- The admin has actions to "Suspend," "Activate," or "Delete" a user account.
- **As an admin, I want to filter users by role (e.g., buyer, owner, agent) or status (e.g., active, suspended) to manage them more efficiently.**
 - The user management page includes filter dropdowns for role and status.
 - Applying filters correctly updates the displayed list of users.
- **As an admin, I want to see a list of listings and owner verifications that are pending approval in a dedicated queue.**
 - The dashboard has a prominent link to a "Moderation Queue."
 - This queue lists all properties and owner accounts awaiting admin approval.
- **As an admin, I want to approve or reject new property listings and owner verifications to maintain platform quality.**
 - The admin can view the full details of any pending item.
 - "Approve" and "Reject" buttons are available for each item.
 - The appropriate status change and user notification are triggered upon action.
- **As an admin, I want to investigate and act on user-submitted reports about fraudulent listings or inappropriate behavior.**
 - A dedicated queue for user-submitted reports is available.
 - The admin can view the report details, the reported content/user, and take action (e.g., remove listing, suspend user, dismiss report).

Platform Settings & Security

- **As an admin, I want to manage platform-wide settings, such as the available property types or amenity options in the filters.**
 - A "Settings" area allows the admin to manage dynamic data lists.
 - The admin can add, edit, or delete options that appear in user-facing forms and filters.
- **As an admin, I want to manage content on static pages like the FAQ and "About Us."**
 - A simple Content Management System (CMS) interface is available for designated pages.

- The admin can edit and save text content without needing to deploy new code.
- **As an admin, I want to update my personal information and change my password.**
 - The admin has a personal profile page accessible from the dashboard.
 - They can securely change their own password and update their details.
